

# Chip Chap

## OVERVIEW

Chip Chap allows everyone to withdraw bitcoin from the cash machine. This is the first application that merge the new world of cryptocurrencies with the daily use money. We believe the future should be easier for every citizen to cash-in and out.

Chip Chap is creating the first fast cash withdraw (FCW) solution that uses decentralized cryptocurrency such as bitcoin and secured bank system.

## GENESIS

The mobile application is born from a collaborative environment for experimentation called Entropy Factory. It's an "incubator", situated in different rural houses around the town of Coves de Vinromá in Castellón, with a new socio economic model that pretends to revolution the economy. Their vision is to improve the quality of life through decentralization, elimination of third parties and innovation on technology and processes.

Through the collaboration of Amir Taaki, Pablo Martin and Peter Todd the founders of Darkwallet and the R&D team from the company Chip Chap the payment methods sector are reaching a step further.

Meanwhile the Darkwallet team are experts on the bitcoin protocol and represent the purest branch for the concept of banking emancipation, R&D team from Chip Chap has earn years of experience in the payment methods sector in a good number of countries.

# CHIP CHAP

Chip Chap is the first application that allows to use bitcoin and other prepay methods in commerces to cashing out in different commerces and ATMs around the planet. Thanks to the Telepay network with more than 10 000 ATMs in Spain.

In this way any user can use the payment method in a safe and secure way. On the other hand, the system pretends to attract the 5 thousand million euro market that represents bitcoin, to bring wealth to the local area and to people's pockets.

It's an interconnection tool among the cryptocurrency and prepay methods that eliminates the banking regulation barrier. Adapted for every country and following the AML/CFT norms.

Darkwallet opens to the banking world the standardization of banking methods for cryptocurrency, only available till now through online exchanges, not so trustful and ripe with fraud and all the mysteries surrounding them. Through open source we open the race for banks to accept the cryptocurrency as something real and integrate their modules into the Darkwallet project.

Darkwallet benefits from credibility and reputation in the community as one of the more advanced bitcoin wallets, as well as being the more flexible in methods of payment, with modalities like group payments.

# Your sovereignty

## DARKWALLET

Darkwallet Alpha 8 incorporates a Chip Chap cash out module, and soon also cash in methods with more than 400 000 commerces around the planet. How many more will join the party?

With Chip Chap, Darkwallet continues to defend and advance it's wallet's strategies:

- Allow the user to own and hold their bitcoin, not to hold them at exchanges, but in the users device.
- Eliminate the speculation around the centralization of funds in such entities, as well as fraud and thefts.
- Compete with traditional exchange houses.
- Legal conditions without bindings.
- Become a standard through open source so anyone can rapidly adapt to its decentralized technology.
